Job Description

The successful candidate will be directly involved in designing, building and operating a secure network infrastructure using the latest security technologies.

Responsibility

The candidate will:

- Engineering and deployment of RiverSafe portfolio of technologies.
- Maintain & develop secure infrastructure services on Windows & Linux Server estates.
- Providing up-keep and monitoring of infrastructure systems to continue delivering high quality systems.
- Good working knowledge of Windows Servers as well as Linux administration with the knowledge and ability to manage Active Directory, create policies and Permissions on both platforms.
- Firewall administration
- VMWare and Cloud infrastructure setup and support

- Take responsibility for own training, learning and development activities.
- Direct involvement with clients to gather requirements and deliver top quality service.

Requirements

- Knowledge of operating systems and networking fundamentals (Cisco networking qualifications are bonus).
- Practical and theoretical awareness about information security, data protection & big data analytics.
- Knowledge of both the Unix and Windows operating systems; must be comfortable on the command line interface.
- Basic programming and scripting skills (Python/Perl, Bash, RegEx, JS).
- Work experience of network, systems administration and 1st/2nd line user support is bonus.
- Experience of producing technical documentation and reports.
- Strong problem solving skills.
- Personal projects in computer sciences domain are huge bonus.

Desirable

- Firewall, Snort/Sourcefire or Splunk experience
- Multilingual

Skills

- Solid communication skills and expertise to translate technical jargon into business familiar language.
- Ability to quickly explore, examine and understand complex problems and how these relate to the customer's business.
- Able to quickly understand and interpret customer problems and navigate complex organisations
- Ability to stop to listen and collaborate with technical and non-technical consumers from IT administrators to executive level stakeholders
- Self-motivated and self-educating, yet willing and able to work collaboratively with both customers and fellow RiverSafe consultants
- Well organized with a healthy sense of urgency, able to set; communicate; and meet aggressive deadlines with competing priorities
- Demonstrable understanding of common enterprise applications (especially in the areas of security and finance)
- Ability & flexibility to travel within EMEA up to 75% of time

Education

- BSc (MSc preferred) in computer science, cyber-security or a related field including engineering, mathematics, and other STEM subjects
- Industry security certifications are a bonus.
